EDUCATION

Bachelor of Information
Technology
Oct 2023 – May 2027

LANGUAGES

Indonesian: Native
English: B2 – Upper Inter.

HARD SKILLS

- › AI & Machine Learning
- › IoT & Embedded Systems
- › React Native / Next.js
- › PHP / MySQL
- › Data Processing & Feature Eng.
- › Research & Sci. Writing
- › Node-RED / MQTT
- › Raspberry Pi / RTU

SOFT SKILLS

- › Leadership & Team Management
- › Public Speaking
- › Strategic Planning
- › Problem Solving
- › Cross-Cultural Comm.
- › Collaboration

I DEWA MADE DHARMA PUTRA SANTIKA

AloT Software Engineer

PROFESSIONAL SUMMARY

Information Technology student with a strong interest in Artificial Intelligence, Internet of Things (IoT), and Robotics. Experienced in organizational leadership, technology-based project development, research, and implementation of intelligent solutions. Highly collaborative, analytical, and adaptable to dynamic work environments.

ORGANIZATIONAL EXPERIENCE

Leader

Jan 2025 – Feb 2026

Robotics And Embedded Systems Research Group (RADE) · ITB STIKOM Bali · Bali

- Directed cross-functional teams to align project objectives with organizational goals, improving overall delivery efficiency and stakeholder satisfaction.
- Established rigorous quality assurance processes to ensure compliance with industry standards, enhancing product reliability and customer trust.
- Prioritized resource allocation across departments to optimize operational productivity and support timely project completion.
- Coordinated communication between internal teams and external partners to streamline workflows and reduce time-to-resolution.
- Defined strategic initiatives to improve team engagement and adoption of best practices, fostering a culture of continuous improvement.

INTERNSHIPS

IoT Internship

Mar 2026 – Jul 2026

PT. Bima Sakti Sanjaya · Bali

- Contributed to the development phase of *Agrisense* (pre-deployment), a Smart Farming IoT platform, by building a real-time web dashboard with Next.js and supporting the mobile workflow in React Native.
- Implemented MQTT data subscription and validated end-to-end sensor telemetry using Node-RED, integrating field sensors with a Raspberry Pi edge device.
- Designed responsive UI and data visualizations for water (EC/TDS), air (temperature/humidity), and soil (moisture/pH/NPK) monitoring to support data-driven decisions.
- Assisted senior engineers during field visits for inspection and maintenance of RTU Smart Panel installations, including troubleshooting, wiring checks, and connectivity verification.
- Structured collected sensor data for AI-oriented use cases such as anomaly detection and predictive irrigation analytics.
